SMARTWATER FORENSIC CODING SYSTEMS

Protecting Your Home, Vehicle and Personal Possessions

Becoming a SmartWater Member

SmartWater provides an ongoing, effective and proven crime prevention solution that protects you, your home and your possessions.

With over a million users, SmartWater is protecting in excess of 20 million items of property in the UK alone. By subscribing to SmartWater you are becoming an active member of the fastest growing criminal deterrent programme in the UK.

How SmartWater Works

When you subscribe to SmartWater, our scientists will create a forensic solution that is uniquely registered to you. SmartWater's Royal-Award winning technology is applied by simply dabbing the liquid into discreet, uneven surfaces of your personal possessions such as jewellery, ornaments and electrical items as well as bicycles and motor vehicles.

- Each bottle carries a unique chemical 'code'.
- Almost invisible under natural light but glows bright yellow under ultraviolet light.
- Virtually impossible to remove.
- More robust than DNA markers.
- Anything marked with SmartWater can be traced back to its true owner.
- Maintains a 100% conviction rate when used as evidence in Court.

How Does it Deter Criminals?

SmartWater is frequently used in Police undercover operations and has established a reputation within the criminal fraternity for increasing the risk of capture and conviction. Traceability is something that criminals hate, and because they know Police check recovered property for SmartWater, they will avoid anything protected with it.

To make thieves aware that your property is protected by SmartWater, every SmartWater system comes with high-visibility signage, which should be prominently displayed in windows and on valuable items. The SmartWater brand has been proven to act as a powerful deterrent, so thieves are more likely to think twice if they know SmartWater is in use.

Vehicles & Bikes

SmartWater supplies a range of forensic products specifically designed for vehicles and motorbikes, whilst bicycles can also be marked using SmartWater Home Coding Systems. SmartWater Vehicles Systems can be used to mark individual components of your vehicle such as alloy wheels and engine parts. Upon purchase, your unique SmartWater code will be logged against your vehicle's unique VIN (Vehicle Identification Number) along with the make and model, which will be recorded on our secure database.

Service and Support

Your membership ensures that SmartWater provides the Police with the necessary training, equipment and forensic support they need to actively search for SmartWater in your area. This activity does not go unnoticed by criminals, and ensures that SmartWater continues to act as a powerful deterrent.

In addition, you also receive the following benefits:

- Peace of mind that your unique SmartWater code and registration details are stored on a secure database maintained to ISO27001 standards.
- Additional solution each year (upon request) to code newly purchased items.
- High visibility deterrent signs to display around your home.

What do I do Next?

Decide which system is right for you:

- Home Coding, 1-4 Bedroom,
- Home Coding, 5+ Bedroom,
- Vehicle Coding,
- Motorbike Coding,
- Scooter Coding.

Please call us for current prices and to order your system. For vehicle coding, you will need the Make, Model and VIN. Alternatively, you can purchase online at www.smartwater.tv

Home Coding, 5+ Bedroom*
